# Define the relationship.

- Can they listen?

# Focus on what matters.

- Praise the good
- What does it do?
- Reusability & what if?

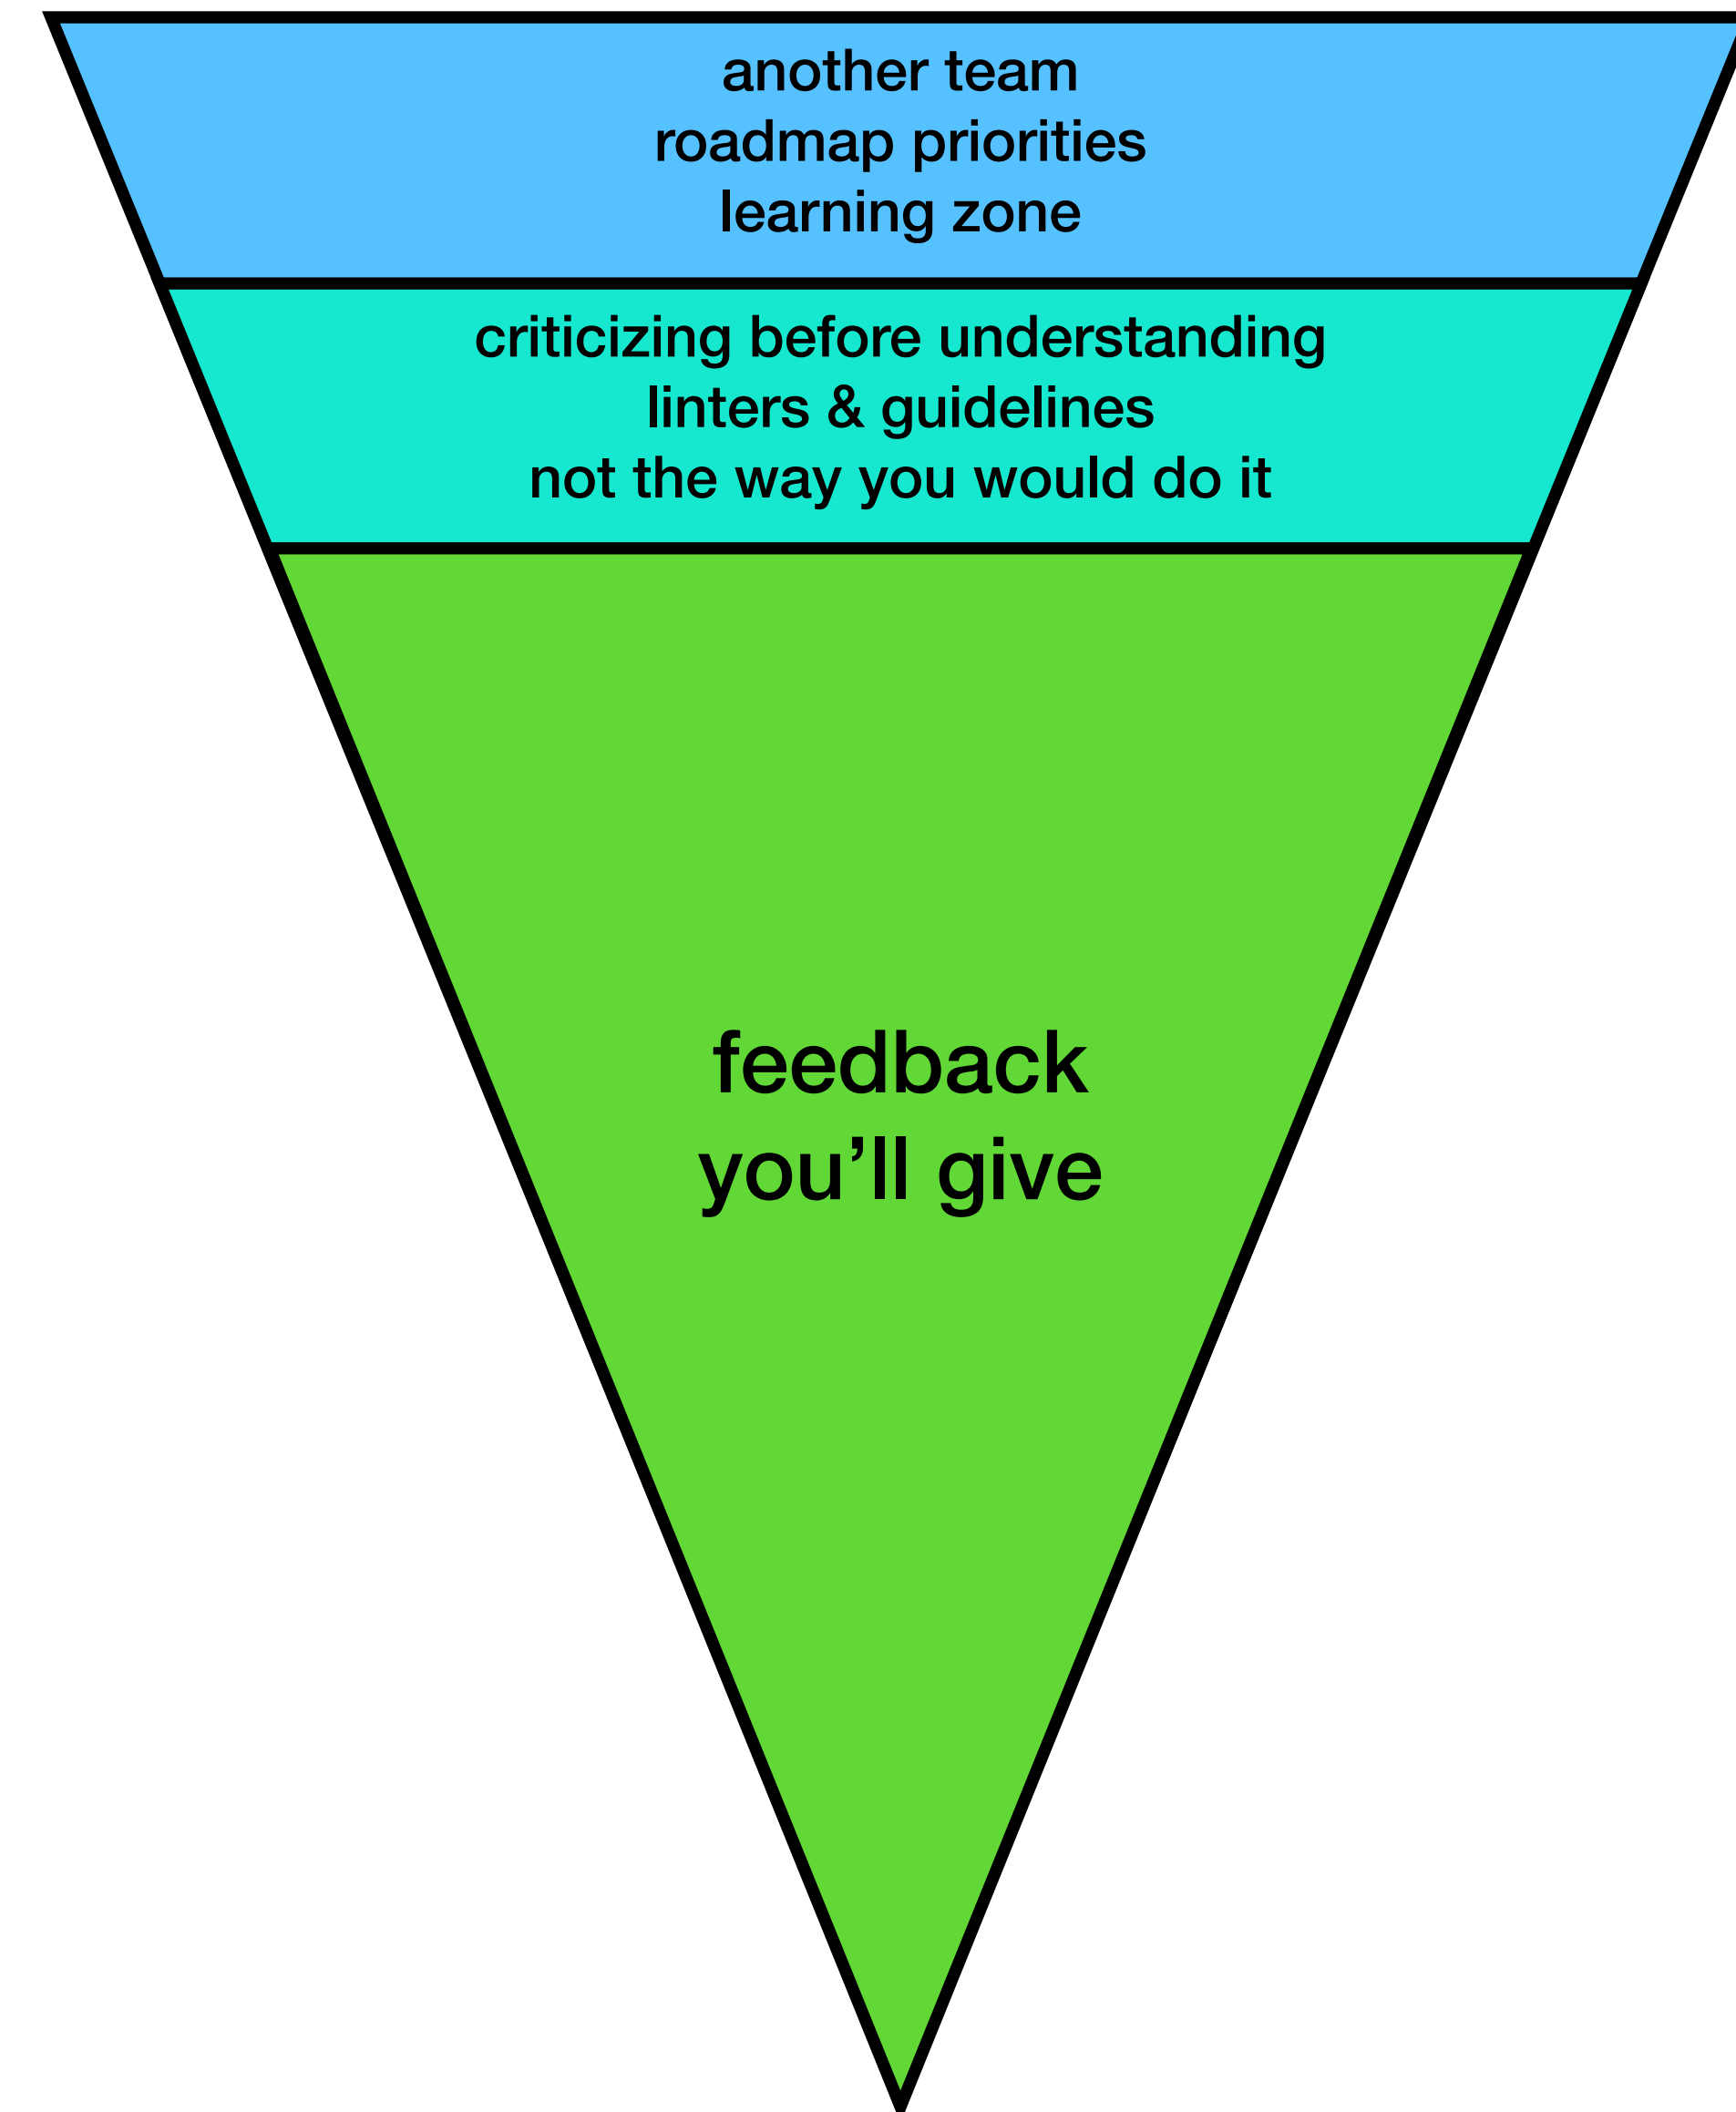

```
61 +     user = PlatformUser(env_data, 'default_cfuaa_user')
62 +
63 +     navigate_to_platform_login_page(driver, env_data)
64 +     default_idp_login(driver, user.username, user.password)
65 +
66 +     error_message = "You already have an account in Mendix, please sign in usi
67 +     MxID3LoginPage(driver).verify_error_message(error_message)
68 +
69 +
70 +@pytest.mark.quick
71 +def test_connect_page_refresh(driver, env_data, cfuaa_and_mendix_provisioned_u
```

When do you decide to let space between lines or not? Seems a little arbitrary to me. This test has a lot of space while others are more packed. Is it based on the fact each time the user makes a significant step (navigates to a new page or a new step in the flow) that you let a line, or something like that?

# Focus on what matters.

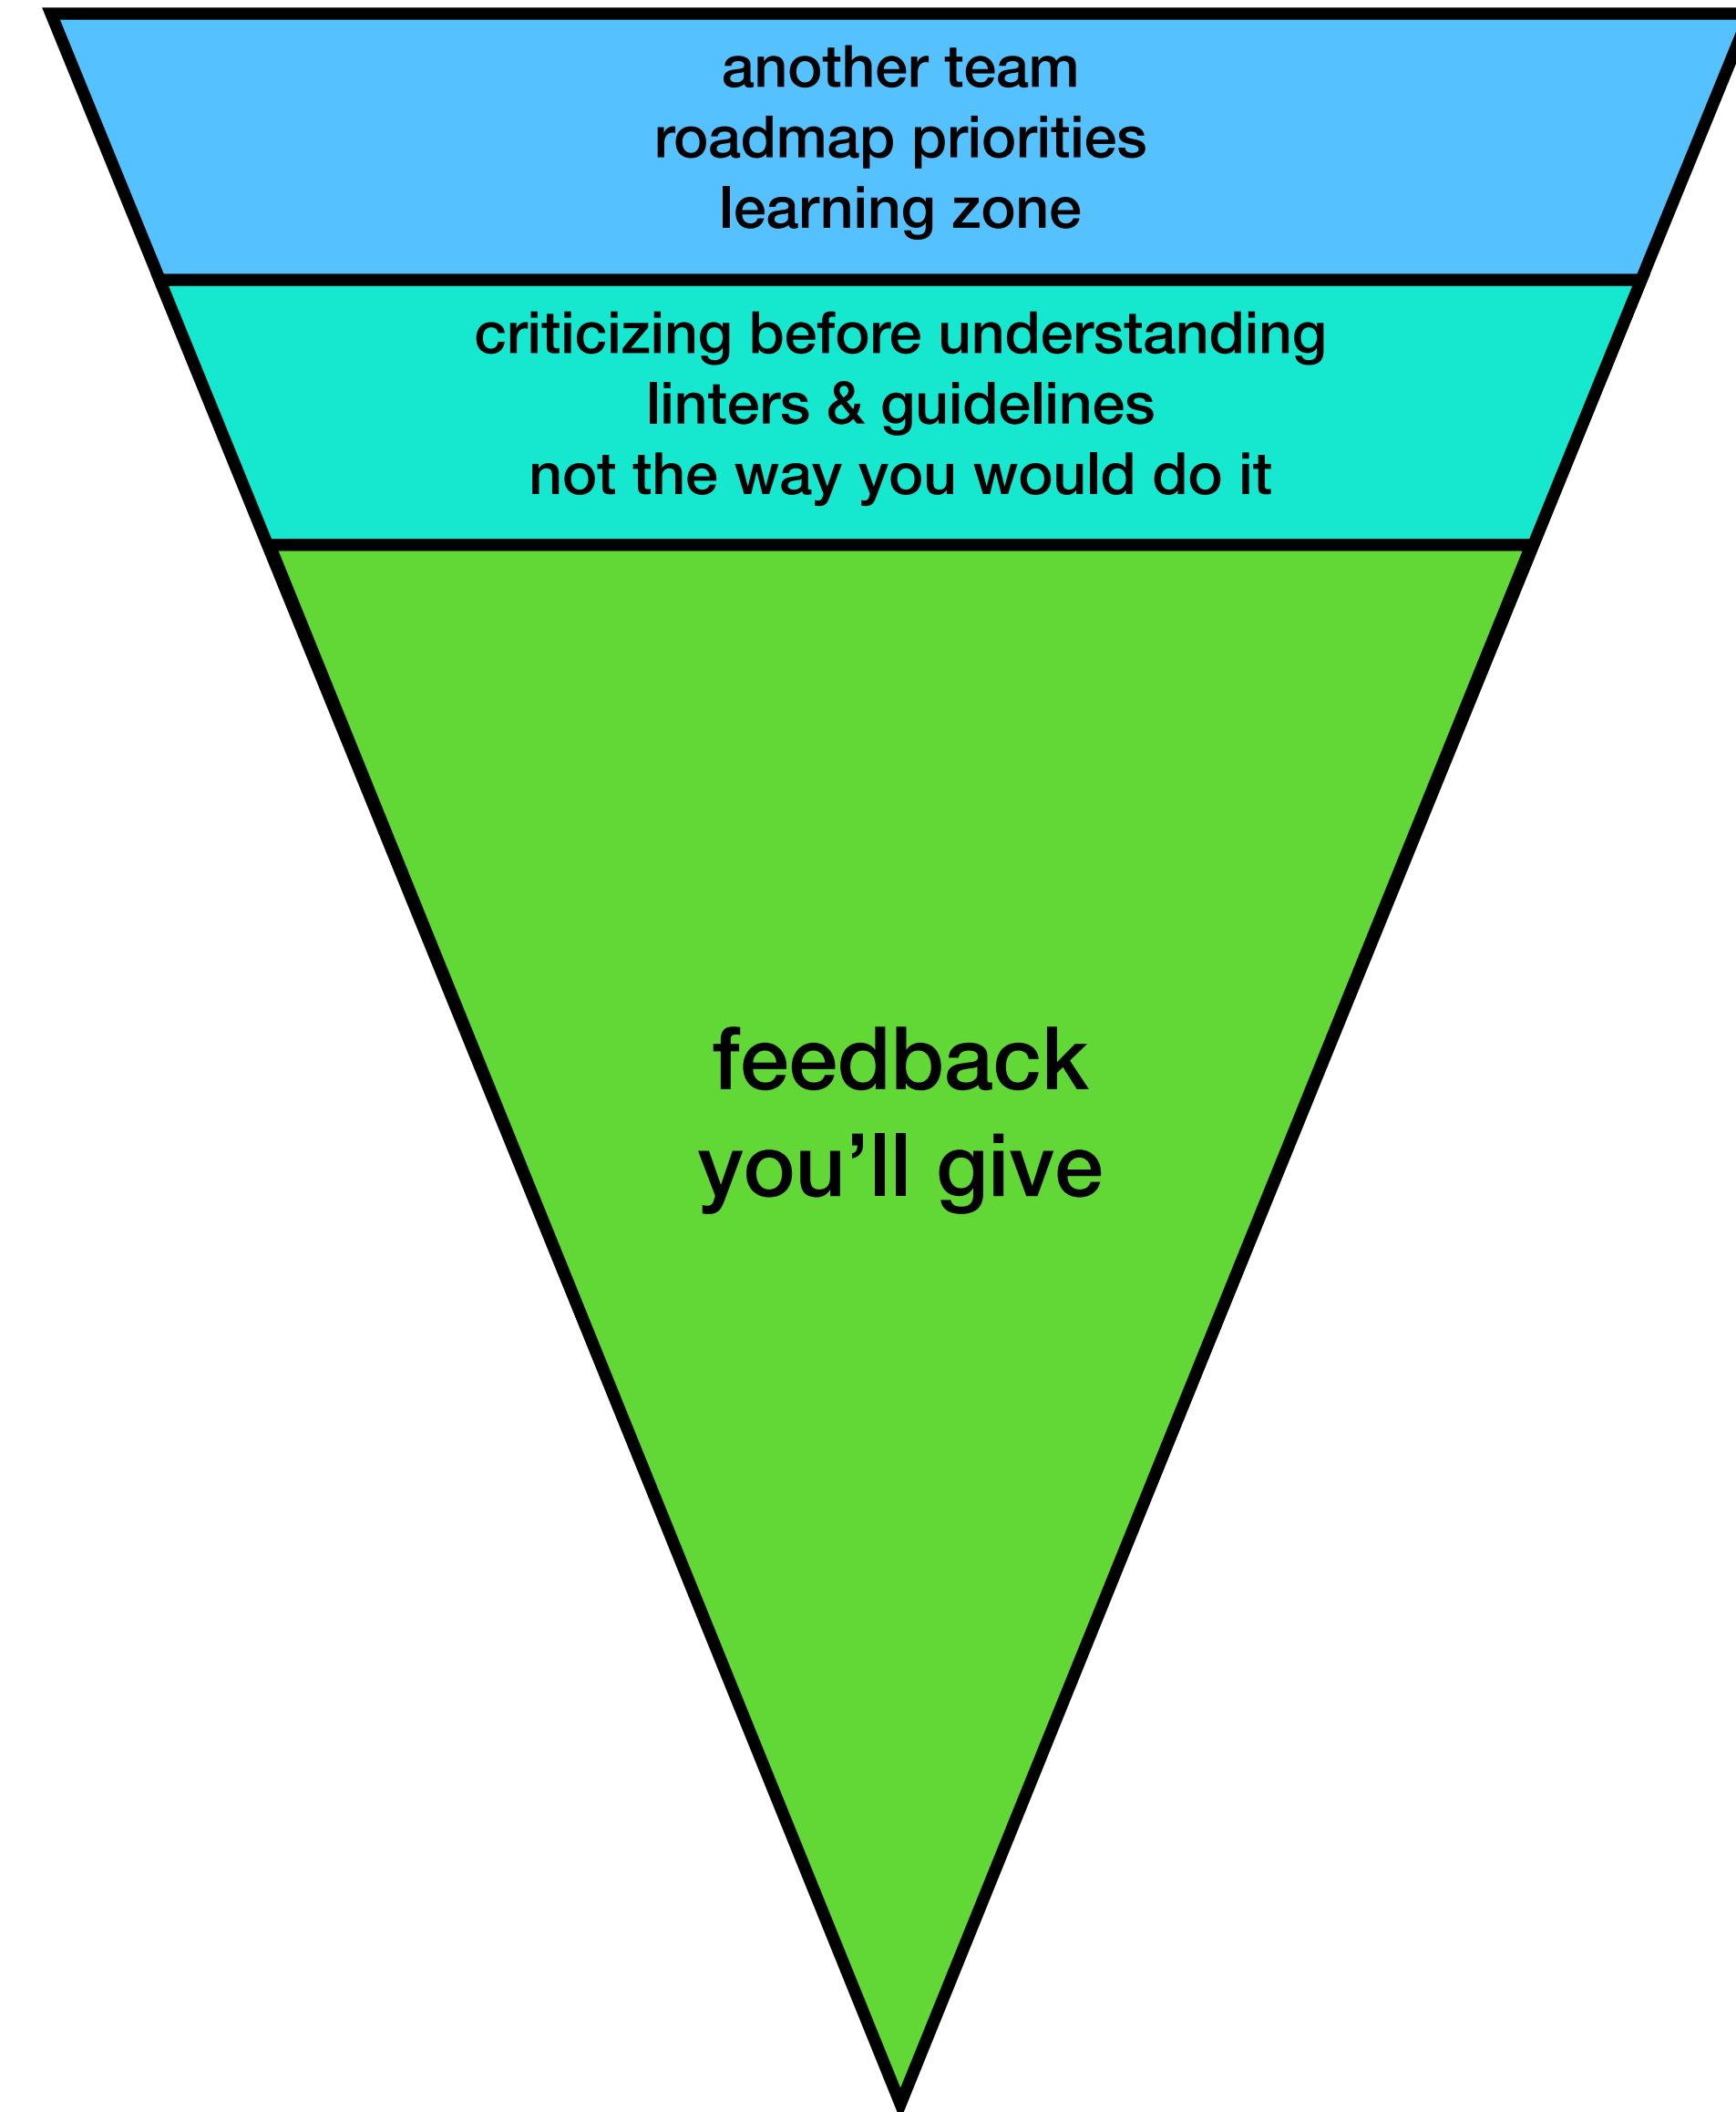

- Praise the good
- What does it do?
- Reusability & what if?

# Communicate well.

- Abstraction & format

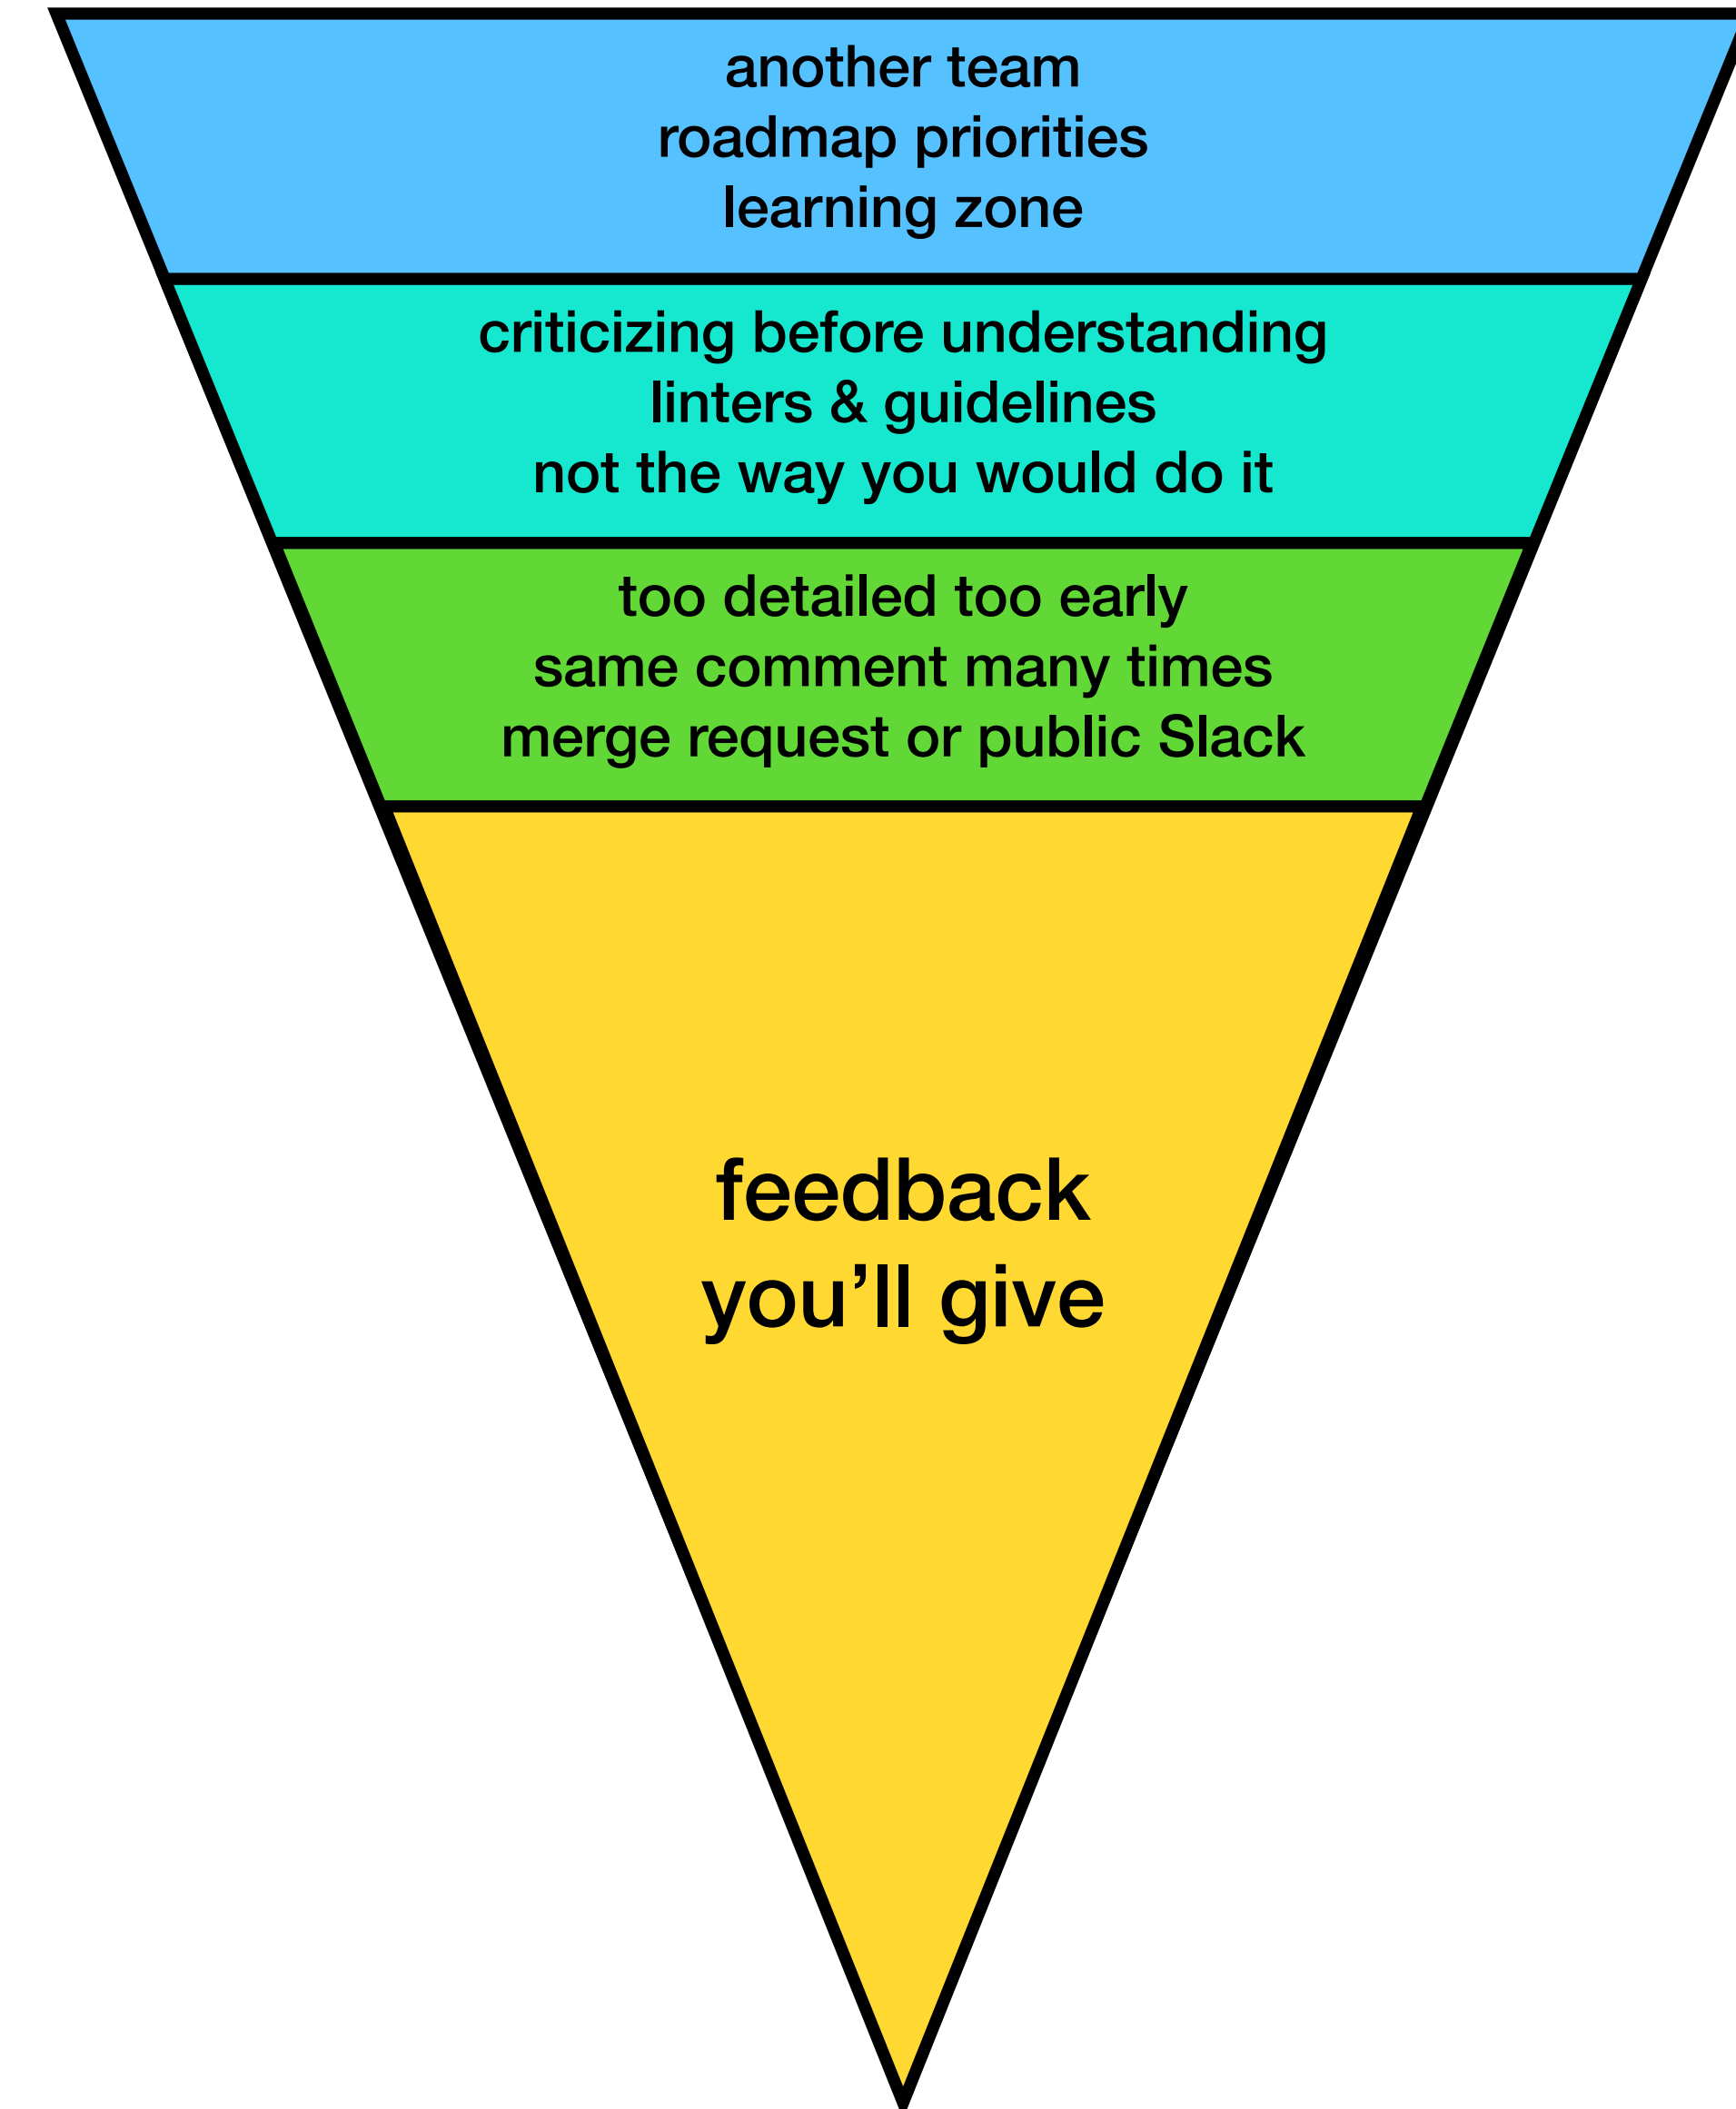

```
1 +from common.page_objects.data_hub.admin_page import AdminPage
2 +from common.data_helpers.data_generators import generate_random_string_of_letters
3 +from common.userflow_helpers.data_hub import navigate_to_entity_page
4 +
5 +
6 +def test_edit_remote_entity(environment_data, logged_in_driver_at_admin_page):
7 +     driver = logged_in_driver_at_admin_page
8 +
9 +     admin_page = AdminPage(driver)
10 +     admin_page.go_to_entities()
```

oh just realized add\_and\_save\_description depends on go\_to\_specific\_entity and go\_to\_entities else how would it navigate to entity page. Let's discuss it

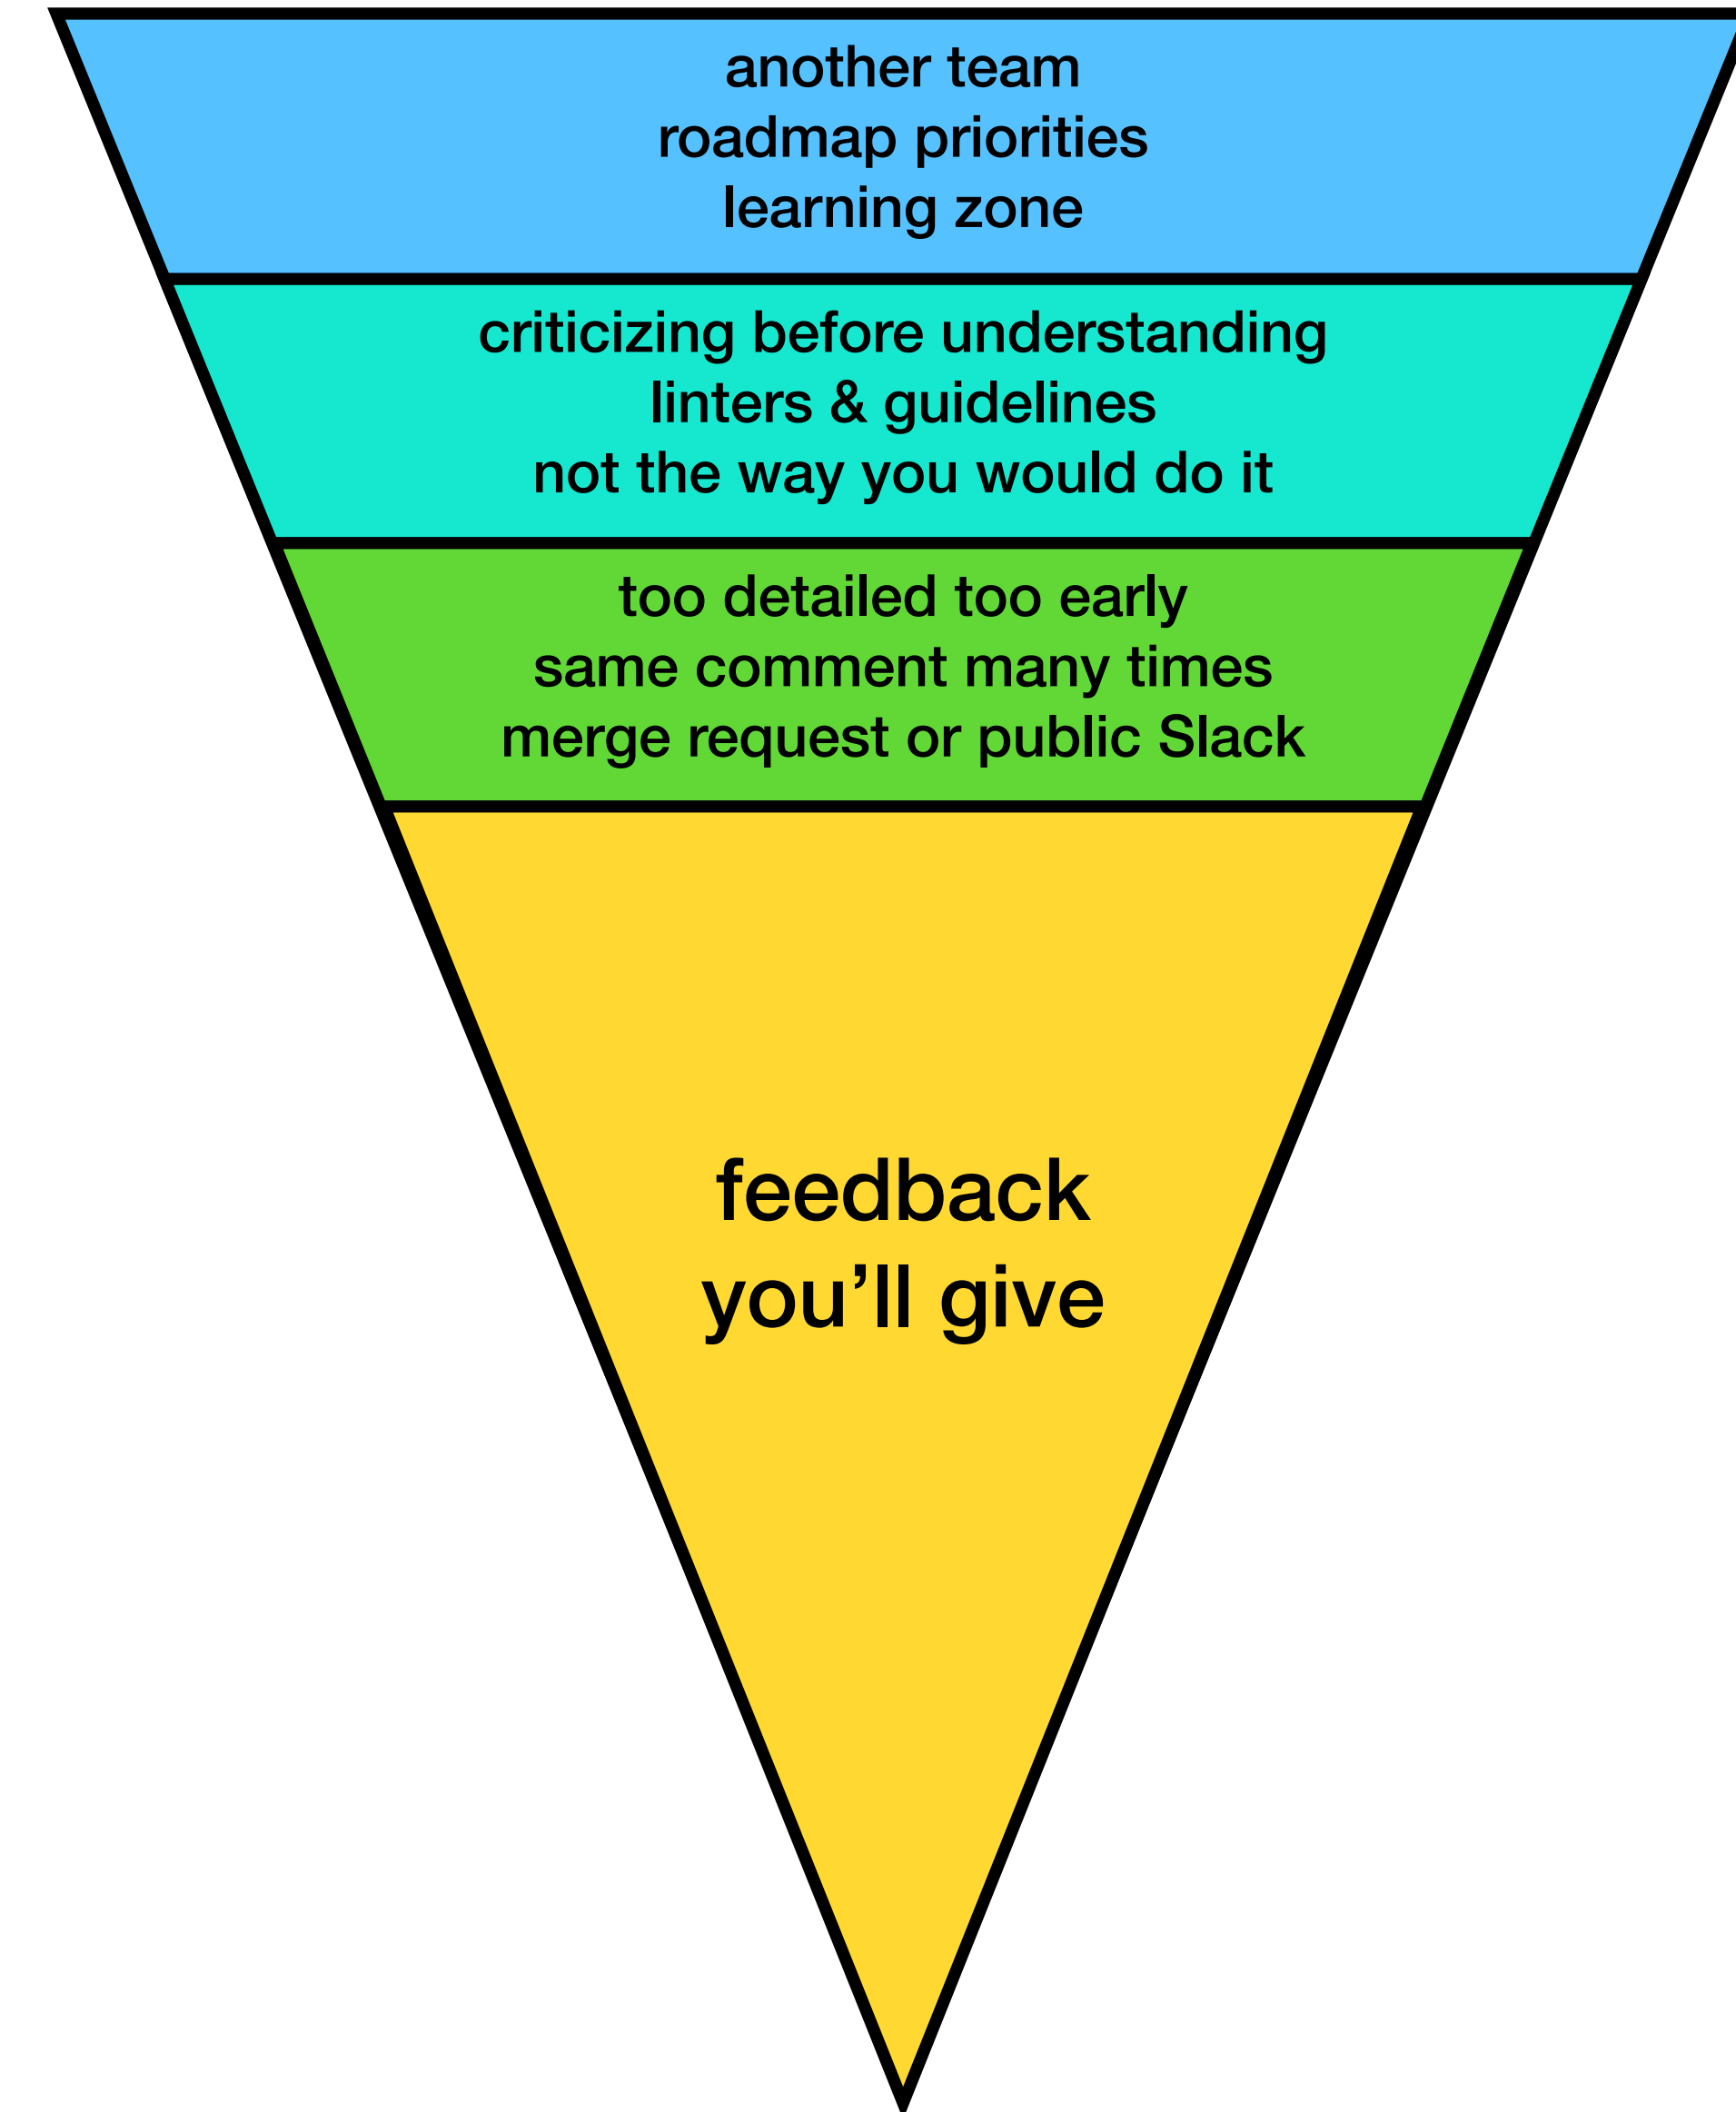

# Communicate well.

- Abstraction & format

# Shorten the delivery gap.

- Async to sync

# Shorten the delivery gap.

- Async to sync

ez 📅 13:16

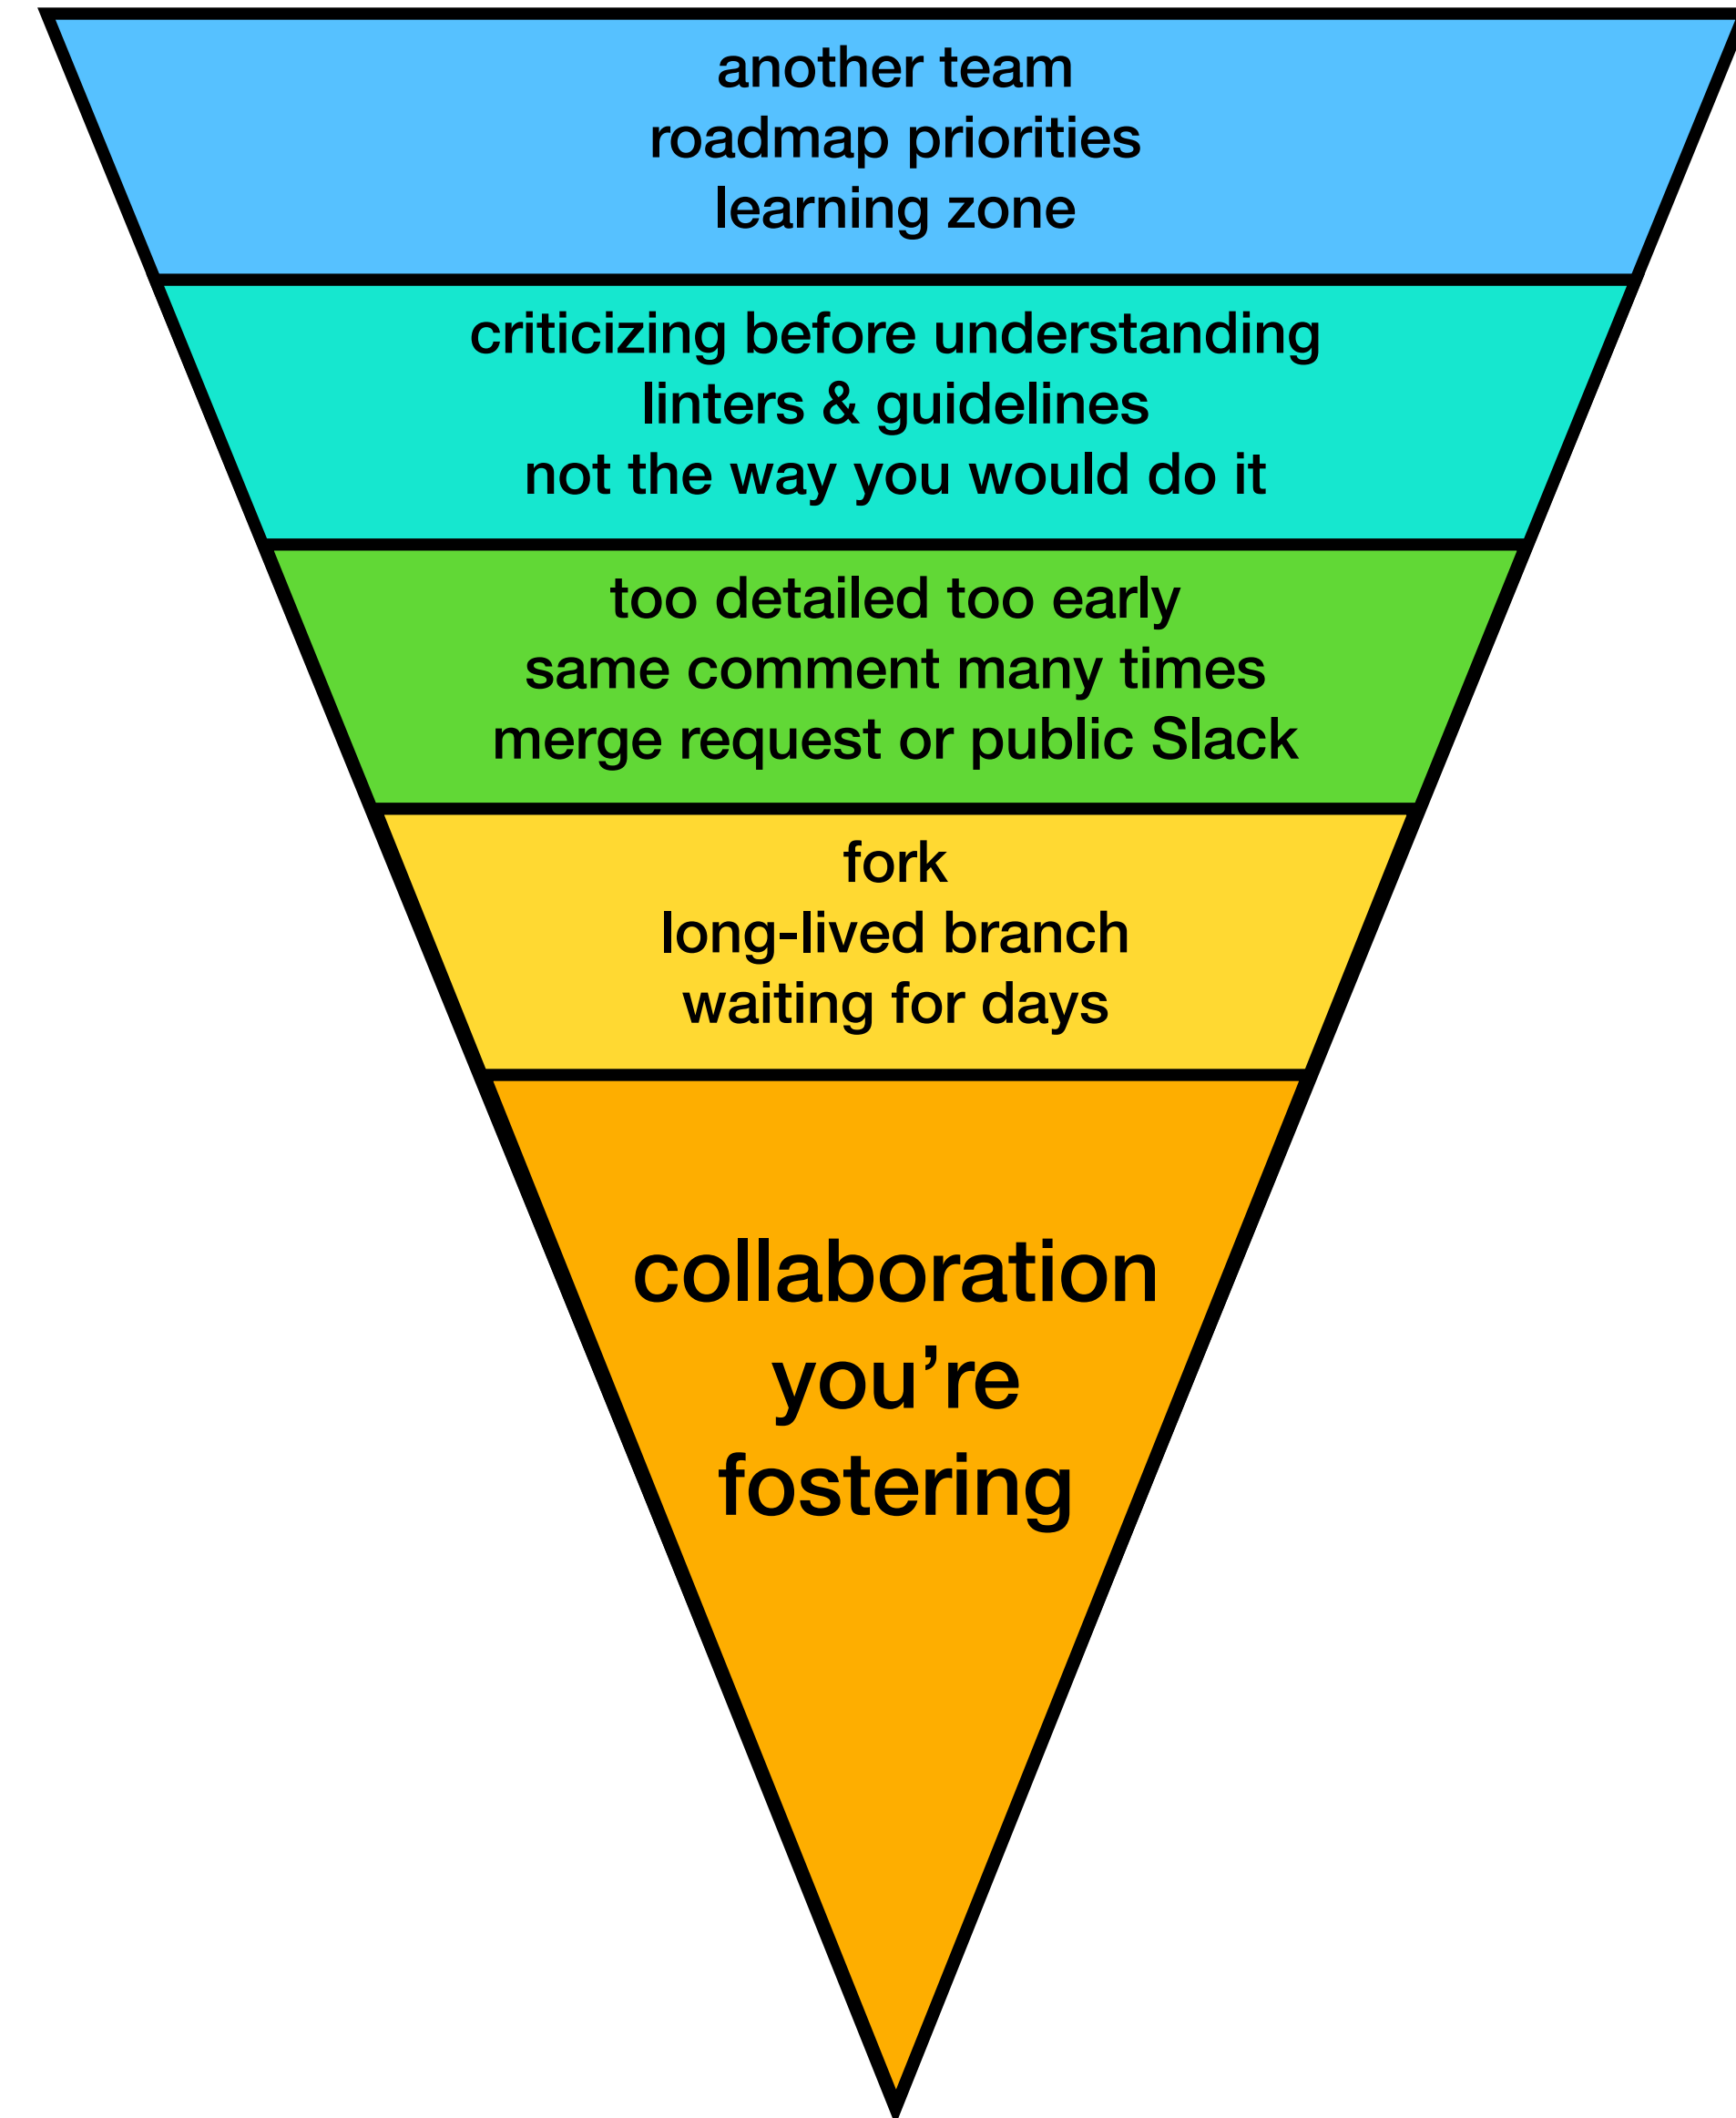

let me just make some tea, i'm free until 2 to pair on the rest.
